Superior Engineering - Superior Quality - Superior Performance
REEL UNWINDER
It is equipped with an automatic reel loading system. Unwinding direction: clockwise or anticlockwise. Controlled unwinding speed according to diameter.
- Pneumatic shaft: 3” or 6” available.
- Max. reel width: 20”
- Max. reel diameter: 50”
- Unwinding speed: up to 150 m/min.

PAPER SLITTING
SYSTEM AND
SCORING DEVICE
Built into the unwinder, this unit allows slitting before longitudinal folding. This unit can be easily by-passed for pinless paper. May be equipped with a paper scoring device to allow for perfect paper folding.

DOUBLE PINLESS CUTTER
The cutter is capable of up to 30,000 cut/hour one-up. In the two-up mode, it can cut up to 60,000 documents/hour. The knife cartridge can be easily replaced, reducing downtime. One requires a 16” cartridge with a double cut is available, allowing documents of A4 size to be obtained from a preprinted reel of 12”.

LONGITUDINAL (PLOW) FOLDER
This module allows for a longitudinal folding. The fold may be centered or offset. This module may be easily by-passed without changing machine set-up.

PAPER TENSION CONTROL
This device allows adjustment of the speed of the unwinding reel according to the downstream equipment and paper tension.

SHEET ACCUMULATOR
This device will accumulate batches of sheets according to the different “families”. Both bottom or top stacking sequence. Allows for a maximum flexibility with the printed reel sequence.

AUTOMATIC POCKET FOLDING MACHINE
Equipped with 4 pockets for different folding options. “C” or “Z” folds up to 18 sheets/80 gsm.

TWIST UNIT
This device allows inserts to be flipped upside down to match the window of the envelope. Easily by-passed.
